Profile

I am student who has just completed my second year studying Software Engineering at the University of Westminster and am really enjoying my degree. During the past semester I have been attaining high marks in all my modules and also been using my free time to play around with new ideas learnt in lectures.

I Attended WWDC10 this year which is Apples World Wide Developers Conference that brings in the best of software engineers across the world under one house to learn about new technologies and social network, in California San Fransico.

At the moment I am developing two iPhone applications and learning programming in Object-C for Mac OS X and iOS devices such as the iPhone and iPad which I am highly interested and passionate about.

Education

2008 - 2012 University of Westminster

BSC (Hons) Software Engineering

Current Modules 2nd year:

Object - Oriented Programming	83%	Computer Graphics	63%
Object - Oriented Design	63%	Software Engineering	69%
Event-Driven Programming	72%	Data Structures & Algorithms	N/A%
Computer System Organisation	65%	Software Engineering Group Project	N/A %

N/A standing for not applicable as some of my results have not been released yet. Passed all my first year module exams gaining a 1st class.

1999 - 2008 Bishop Douglass RC High School & Harrow College

A Levels: Applied ICT Double Award (CC)

GCSEs: 8 GCSEs passed including English, Maths and Double Science

Skills

Java: Have studied the java language with its API using the IDE NetBeans and UNIX command line. Achieved High marks of 80% in phase test and final exam also gaining 86% and 76% for my courseworks. First coursework covered topics of classes, with OOP general concepts with MVC and the second course work covering inheritance, polymorphism, file handling and the Java Collections Framework.

C, C++, Object-C: Studied C and C++ at university, making a dictionary using pointers, linked lists and reading from files storing lists of words with meanings. Taught myself Objective-C to creating two iPhone applications. One a Tea app that utilises, tables, and web views to display info about types of teas. over a Sushi App that adds up the total price for number of sushi colored bowls. I used Core Animation for animating bowl graphics being added, taken away by gestures and audio.

HTML, CSS, XML, JavaScript: Languages I learnt have allowed me to design, create and develop enticing interactive web pages. With the use of these skills I created website templates for companies and friends in my spare time.

Software Packages: Rational Rose, NetBeans IDE, Eclipse, Emacs, MS Studio 2008 Xcode SDK, Adobe CS Suite (*DreamWeaver, Fireworks, Flash, Photoshop*), Microsoft Office Suite (*Word, Excel, Power Point, Access*), iWork Suite.

Methodologies: UML, Use Case & Scenario, Project Management, ERD, SSADM, SWOT.

Technical Writing: Essay reports, posters and power point presentations.

Work Experience

Assistant Admin: MHFoods, August 06 - Present

I am supporting myself at University by working part-time at my father's company which distributes foods to various delicatessens, restaurants and supermarkets. I have helped with the rollout of computers, installing networks, dealing with the managing, maintenance, repairing and upgrade of computers. Also I do the invoices, VAT returns, letters for the company, and dealing with customers over the phone.

Assistant Bank Clark: Marfin Laiki Bank, June 05 - July 05

In my time at the bank I worked being a bank clerk which duties included, filing statements, dealing with customer enquiries whether this be on the phone or in person at the bank. I found it great when I got to meet the customers I had been speaking to on the phone initially then in branch afterwards. This helped develop my skills including effective time management, team work and customer service. The experience of working in many different environments has been beneficial and means I can build effective working relationships and quickly establish rapport.

Production Assistant: Orexis Fresh Foods Ltd, June 03 - July 03

I've been working on both production, packaging lines and the warehouse in Orexis Ltd. They produce greek and international dips supplying for whole sale, retail and catering trades. Working on both these lines I had to have accurate timing with working in a team to keep up with the pace of production and packing. These developed skills in time management and group work allowed myself to be fast and efficient in producing and packaging the food orders.

Interests and Hobbies

Computing: I have always been fascinated with computers growing up as a child. From the first time I got my hands on one as a young child being intrigued how it all works from the small to big scales of things made me interested in them technically. From this point I started building and also maintaining my own and others computers. I started to learn how to program and learnt about Mac OS X, its elegance in both respect to design beauty between the marriage of hardware and software together.

Travel and Photography: I loved the atmosphere in San Francisco, the different culture and views that I observed and taking photos in presence of in truly great weather with a more laid back way of life than the busy pace of London. Photography for me is not snapping a camera but capturing a photo in the moment that tells a story of a thousand words or even cannot be describe.

Music: Coming from a highly musical background I really appreciated music in all its forms playing a musical instrument and being in an orchestra with my woodwind clarinet and string violin. The essence of how music bares so much emotion and to help you unwind or help you get through a painful time.
